About me

Having a masters degree in Electronics Engineering I worked for an engineering company for 7 years. I've started learning web development in 2018, though programming has been my passion since high school.

At the moment I have experience in building modern websites and web applications, using public APIs, configuring databases, working with React framework and other JS and CSS libraries.

Fluent in English, communicative, team worker, attentive to details, easily master new knowledge and skills, like to solve problems.

I'm eager to apply my skills on a new project.

In my free time I travel, shoot and edit video. Married, raising two children.
